

# OPERATION FRIDAY

Beginning Friday, November 2<sup>nd</sup>, third grade students will participate in "Operation Friday" twice a month for the remainder of the school year. Operation Friday is a special day devoted to Math problem solving procedures and computation during our regular Math classes. The students need to have a clear understanding of when to use all four operations before they get to 4<sup>th</sup> grade, so students will use manipulatives, games, and follow regular problem solving strategies to solve and create math problems using correct operations. Students will use real word examples to connect problem solving and mathematics to the world around them.
